DIGITAL DEFENSE FURTHER ENHANCES SECURITY COMPLIANCE REPORTING

San Antonio, TX – September 10, 2007 – Digital Defense, Inc., a provider of information security and risk management solutions, today announced the latest reporting enhancement to its Network Security Awareness System (NSAS). The enhancement responds directly to client requests for increased flexibility in the platform’s ability to report on the status of an organization’s vulnerability remediation efforts. In particular, the enhancement provides client organizations with the ability to better respond to information requests made by auditors and examiners, specifically during information security audits.

“We believed that a Software as a Service (SaaS) strategy, launched in the formative stages of our Company, would enable us to most effectively respond to evolving client information security compliance needs,” stated Larry R. Hurtado, president and CEO of Digital Defense. “Based on client and partner feedback, the execution of this strategy is resulting in a differentiated level of service and support that sets Digital Defense apart from competitors. Our third generation NSAS platform not only enables rapid development of new features that support our wide array of information security and risk management solutions, but also allows us to effectively scale our business operations to ensure that we continue to provide exceptional service and support to our growing base of clients.”

Digital Defense based the Frontline™ secure web portal and the underlying NSAS platform on a SOA-centric API (Service Oriented Architecture Application Programming Interface) design framework. The SOA API allows clients and partners to integrate the NSAS architecture with a variety of third party solutions, further expanding the reporting and data delivery methods already made available by the framework. Further, this API facilitates the Company’s ability to incorporate new features and services into the NSAS, and effectively and expeditiously respond to client, market, and industry needs.

About Digital Defense

Digital Defense, Inc., an approved scanning vendor by the Payment Card Industry (PCI) Security Standards Council (SSC), delivers a comprehensive portfolio of risk management services including information security programs, regulatory compliance solutions, security testing of IT products and security education offerings to financial
